

# alexandria 2.0

## Plugins to index contents

Now Alexandria will search for contents inside pdf, word, excel and powerpoint files.

## Up-to-date database index

Alexandria keeps a real-time index that makes your contents searchable as soon as they get added to the system.

## Document collision control

Detects and warns when adding a document that is already in the database.

## Product overview

Alexandria is a dynamic Document Management System that keeps your documents and multimedia assets organized with an intuitive search interface.

Alexandria gives access to your document database through an interface that works in real-time to deliver your resources anywhere in your intranet or the internet.

Exceptional performance that will make you forget you are working on a remote system.

An accessible environment (AA) a fully functional interface even without javascript.

## A professional DMS

The 100% web interface gives access to the portal from anywhere: your office, the airport, your home.

Multi-language support, for both the user interface and document contents.

Flexible document contents any kind of text documents, images or media files are supported.

Automatic thumbnails generation, peek your information without losing the current web page.

Content metadata, specify tags associated to an image or document to refine your searches.

Multiple documents upload using zip files or shared upload folders.

Bulk edit save time by editing, publishing or removing multiple documents on the same page.

Edit your images directly on the server without leaving the application with our image edition interface.

## An intuitive search interface

Real-time indexes that will register your new contents as soon as they get uploaded to the system.

Free-text search for all supported document formats.

Language-specific characters, like 'ñ', acute-accented letters ('á', 'é'), umlaut... the system performs intelligent searches aware of the language and format of the document.

Search similar images according to MPEG-7 metadata calculated from histogram, textures and color distribution.

Plugins to index files in new formats, which makes Alexandria an extensible platform.

Search by tags or any custom document attribute.

## Share your documents secure and confidentially

Access restrictions that specify ACLs for each menu option and user profile.

Web services API to integrate with your own projects: search, create or modify documents from your own applications.

Flexible security system to integrate with your own credentials repository: LDAP, RDBMS or text files.

System log, a powerful tool that displays system activity in real-time: new uploaded documents, modifications, etc.
